Contents

1 Introduction 1
1.1 Complex Numbers 1
1.2 Stereographic Projection of Complex Numbers 8
1.3 Sets. Curves 11
1.4 Functions. Limit of a Function. Continuous Functions 17
1.5 Definition of a Function on the Domain Boundary 25
1.6 Functions Depending on a Parameter. Sequences and Series 27
1.7 Power Series 34
1.8 Line Integral of a Complex Function 42
1.9 Integrals Depending on a Parameter 52
Exercises 56

2 Analytic Functions and Their Properties 61
2.1 Differentiable and Analytic Functions 62
2.2 Cauchy's Theorem. Goursat's Theorem 75
2.3 Cauchy Integral Formula 81
2.4 The Main Criterion for Analyticity 84
2.5 Harmonic and Conjugate Harmonic Functions 92
2.6 Indefinite Integral of Analytic Function 98
2.7 Analyticity Conditions 104
2.8 Uniqueness of an Analytic Function 114
2.9 Analytic Continuation 116
2.10 Multi-valued Analytic Functions and Riemann Surfaces 118
Exercises 125

3 Singular Points, Laurent Series, and Residues 129
3.1 Singular Points on the Boundary of the Disk of Convergence . . . 130
3.2 Sufficient Condition for a Singular Boundary Point 133
3.3 Laurent Series Expansion 138
3.4 Classification of Singular Points 145

3.5 Removable Singular Points 147
3.6 Liouville's Theorem 150
3.7 Poles 151
3.8 Essential Singular Points 156
3.9 Residues and the Fundamental Theorem on Residues 158
3.10 Residue Calculus 163
3.11 Application of the Fundamental Theorem on Residues to Improper Integrals. Jordan's Lemma 170
3.12 Main Classes of Integrals Evaluated Through Residues 176
3.13 The Argument Principle 184
3.14 Rouché's Theorem 187
Exercises 191

4 Conformal Mappings. Elementary Functions 199
4.1 Geometric Interpretation of the Absolute Value and Argument of Derivative. Concept of Conformal Mapping 200
4.2 Linear Function 205
4.3 Symmetric Points 208
4.4 Function $w = \frac{1}{z}$ 211
4.5 Fractional Linear Transformation 214
4.6 Functions $w = z^n$ and $z = \sqrt[n]{w}$ 226
4.7 Joukowski Function 235
4.8 Exponential and Logarithmic Functions 242
4.9 Function $w = z^\alpha$ 249
4.10 Functions $w = \cos z$ and $w = \sin z$ 252
4.11 Functions $\tan z$ and $\cot z$ 258
Exercises 261

5 Fundamental Principles of Conformal Mappings. Transformations of Polygons 269
5.1 The Criterion for Local Univalence 270
5.2 The Principle of Domain Preservation 275
5.3 The Principle of Boundary Correspondence 279
5.4 The Riemann Mapping Theorem 284
5.5 The Riemann–Schwarz Symmetry Principle 292
5.6 Transformation of the Upper Half-Plane into a Rectangle 301
5.7 Transformation of Polygons 313
Exercises 331

Bibliography 339
