Preface	5
Contents	7
Introduction	11
1 Theory of Combustion	15
1.1 Combustion and fire	15
1.1.1 Fire triangle and tetrahedron	17
1.1.2 Combustion time and extent	18
1.2 Combustion of substances of different states	19
1.2.1 Gasses combustion	20
1.2.2 Liquids combustion	21
1.2.3 Solids combustion	21
1.3 Combustion in natural fires	22
1.4 Combustion products	24
1.4.1 Yields of combustion products	25
1.4.2 Concentration of combustion products	27
2 Application of Physical Chemistry, Chemical Thermodynamics, and Combustion Kinetics	31
2.1 Heat transfer	31
2.1.1 Definition and heat transfer form	31
2.1.2 Heat flux and fire	37
2.2 Ignition	38
2.2.1 Piloted ignition and autoignition	38
2.2.2 Liquid fuels ignition	38
2.2.3 Solid fuels ignition	40

2.3 Flame spread	43
2.3.1 Definitions and flame spread theory	43
2.3.2 Fire spread on solid surfaces	44
2.3.3 Fire spread through porous solid arrays	45
2.3.4 Fire spread on liquids	46
2.3.5 Fire spread through a dwelling	47
2.3.6 Typical fire spread rates	47
2.4 Burning rate and energy release rate	48
2.4.1 Definition and burning rate theory	48
2.4.2 Burning mass flux	49
2.4.3 Energy release rate	52
2.4.4 Fire growth rate	54
2.5 Fire plumes	56
2.5.1 Definition and theory	57
2.5.2 Fire plume and jets	59
2.5.3 Flame height	61
2.5.4 Fire plume temperatures	63
2.5.5 Flame lengths and temperature calculation	66
3 Fire Dynamics in Fire Protection and Safety, and Fire Suppression	73
3.1 Position and role of fire dynamics	73
3.1.1 Definitions of basic terms in fire dynamics	74
3.1.2 Changes on the fireground	76
3.1.3 Protective equipment	77
3.1.4 Fire behaviour	78
3.1.5 Flow path	80
3.1.6 Operating above the fire	86
3.2 Aspects of fire dynamics	90
3.2.1 Fire and heat	90
3.2.2 Fire ignition	92

3.2.3 Room fire dynamics	92
3.2.4 Flame spread	94
3.2.5 Smoke	95
3.3 Water application	96
3.3.1 Exterior water application	96
3.3.2 Interior water application	98
4 Procedures, principles and calculations in the dynamics of internal fire development	109
4.1 Compartment fires introduction	109
4.2 Stages of fire development	109
4.2.1 Developing fire	110
4.2.2 Flashover	111
4.2.3 Fully developed	113
4.2.4 Cooling stage	115
4.3 Fire induced flow	116
4.4 Compartment flow dynamics	117
4.4.1 Flow in a room	118
4.4.2 Smoke filling in a leaky compartment	121
4.4.3 Smoke movement in a building	124
4.4.4 Smoke filling of single room	127
4.4.5 Vent flows	127
4.4.6 Smoke temperature	129
4.5 Fuel generation in a compartment	131
4.6 Fuel load and burning duration	132
5 Dynamics of Outdoor Fire Development	137
5.1 Outdoor fires introduction	137
5.1.1 Large-scale wildfires	139
5.2 Mechanisms of wildfire acceleration	139

5.2.1 Growth of surface fire spread	141
5.2.2 Large-size flames	143
5.2.3 Unique spread models	144
5.2.4 Fires burning and merging	145
5.3 Surface fire spread	147
5.4 Multiple fires burning	147
6 Liquid Fuel Fires	151
6.1 Introduction	151
6.2 Spill and pool size	151
6.3 Fire growth rate	153
6.3.1 Basic theory of flame spread on liquids	153
6.4 Fire size	159
References	167
