Foreword	xii
Acknowledgement	xiii
Editors biographies	xiv
List of contributors	xv
Introduction	xviii
1 The relationship between climate change and the city	1-1
<i>Cristina Engel de Alvarez, Gustavo Kamino, Victor Bussoloti and Luís Bragança</i>	
1.1 Introduction	1-2
1.2 Global warming effects	1-4
1.3 City infrastructure and services impacts	1-9
1.4 Sustainable city responsibilities	1-17
1.5 Conclusions	1-20
Bibliography	1-21
2 Project logic for the reorganization of cities in transition: a Hispanic American application	2-1
<i>Fermin Rodríguez and Alvaro Valverde</i>	
2.1 Introduction	2-1
2.2 Discussion of urban transition	2-3
2.3 Methodological development of the proposal	2-6
2.3.1 Purpose	2-6
2.3.2 Objectives	2-6
2.3.3 Processes, procedures, and resources	2-7
2.3.4 Project implementation	2-9
2.4 Conclusions	2-24
Additional reading	2-26
Bibliography	2-26
3 An urgent urban design challenge: time, sustainable mobility, and the humanization of collective space	3-1
<i>Miguel Bandeira, Filipa Corais and Fátima Pereira</i>	
3.1 Time and sustainable urban mobility	3-1

3.2	Sustainable urban mobility and the humanization of collective space	3-2
3.3	Implementation and conclusions	3-9
	Bibliography	3-14
4	New trends in urban mobility	4-1
	<i>Begoña Guirao and Daniel Orellana</i>	
4.1	The role of public transport and active mobility in 21st century cities	4-1
4.2	Disruptive changes: new vehicles and innovations in information and communications technology	4-3
4.3	The influence of ICT on mobility analysis and management	4-5
4.4	Motorised mobility: trends and discussion	4-7
4.5	Trends in active mobility research	4-11
4.6	Conclusions and forthcoming challenges for 21st century cities	4-15
	Bibliography	4-16
5	Coexistence of urban regeneration policies and sustainable mobility: reflections on, and practical cases of, urban acupuncture	5-1
	<i>Miguel Bandeira, Filipa Corais and Fátima Pereira</i>	
5.1	Introduction	5-1
5.2	The benchmark for sustainable urban mobility	5-3
5.3	And the benchmark of urban regeneration	5-4
5.4	Urban acupuncture applied to sustainable urban mobility and urban regeneration	5-5
5.5	Amongst practical cases	5-7
5.6	Concluding summary	5-10
	Bibliography	5-11
6	Tactical urbanism: collective interventions in urban public spaces	6-1
	<i>Matías Cardoso, Daniel Orellana and M Augusta Hermida</i>	
6.1	Introduction	6-1
6.2	Fundamentals of tactical urbanism	6-2
6.3	Tactical urbanism around the world	6-4
6.4	Types of mobility-focused TUI	6-5
	6.4.1 Sidewalk extension	6-5

6.4.2	Pedestrian crossings	6-9
6.4.3	Pedestrian plazas and parklets	6-9
6.4.4	Bikeways	6-10
6.4.5	Complete streets	6-10
6.4.6	Pedestrianisation	6-10
6.5	Methodological approaches	6-11
6.5.1	Quick build for better streets	6-11
6.5.2	Action-oriented planning	6-13
6.6	A roadmap for tactical urbanism interventions	6-13
6.6.1	Diagnostic	6-14
6.6.2	Planning and design	6-17
6.6.3	Implementation	6-18
6.6.4	Evaluation	6-19
6.6.5	Final project	6-20
6.7	Limitations and further research	6-20
6.8	Tactical urbanism and the COVID-19 pandemic	6-21
	Acknowledgement	6-22
	Bibliography	6-22
7	Seeding picoscale solutions for social macro goals: complex thinking in projects for vulnerable communities	7-1
	<i>Andrea Naguissa Yuba, Gilfranco Medeiros Alves, João Onofre Pereira Pinto, Juliana Trujillo and Karina Trevisan Latosinski</i>	
7.1	Introduction	7-1
7.2	The frameworks merge	7-2
7.2.1	Framework 1: the water, energy, and food security nexus	7-2
7.2.2	Framework 2: Appropriate Technology	7-4
7.3	Projects' untangling	7-5
7.3.1	Solar-energy-based irrigation project in Campada Maria, Guinea-Bissau	7-5
7.3.2	Coffee bean solar dryer and solar-energy-based irrigation projects—Jamaica	7-10
7.4	Project assessments based on theoretical approaches	7-15
7.5	Lessons learned and final remarks	7-17
	Acknowledgements	7-20
	Bibliography	7-21

8	Heritage conservation and sustainability	8-1
	<i>Maria Matilde Villegas, Vladimir Fernando Stello and Ricardo Rodrigues</i>	
8.1	Sustainable development	8-1
8.2	Preservation of cultural heritage	8-2
8.3	The perspective of sustainability in heritage conservation	8-7
	8.3.1 First stage: 1964 to 1972	8-7
	8.3.2 Second stage: 1972 to 1990	8-8
	8.3.3 Third stage: 1990 to 1999	8-8
	8.3.4 Fourth stage: 1999 to 2011	8-9
	8.3.5 Fifth stage: 2011 to 2014	8-9
	8.3.6 Sixth stage: post-2015	8-10
8.4	Conservation as a principle for sustainability	8-10
8.5	Some additional considerations	8-14
	Bibliography	8-16
9	The role of a detailed microclimate monitoring in developing a cultural heritage resilience plan	9-1
	<i>Ilaria Pigliautile and Anna Laura Pisello</i>	
9.1	Introduction	9-1
9.2	The importance of preserving cultural heritage sites	9-2
	9.2.1 Climate change effects on CH—the role of microclimate	9-3
	9.2.2 CH resilience	9-4
9.3	The role of monitoring	9-6
	9.3.1 Long-term in-field environmental monitoring	9-6
	9.3.2 Spatially detailed short-term environmental monitoring	9-8
9.4	Comprehensive protocols for CH resilience	9-10
9.5	Conclusions	9-11
	Acknowledgement	9-11
	Bibliography	9-11
10	Designing buildings for adaptability, flexibility, and durability	10-1
	<i>Rand Askar, Luís Bragança and Helena Gervásio</i>	
10.1	Why adaptable buildings?	10-1
10.2	Featuring adaptability in buildings	10-3

10.3	Connecting adaptability, flexibility, and durability	10-4
10.4	Models and trends	10-5
10.4.1	The ‘open building’ movement	10-5
10.4.2	Building layering and decomposition	10-7
10.4.3	Design for resilience	10-9
10.4.4	The circular economy in buildings	10-10
10.5	Discussion and final remarks	10-14
	Bibliography	10-15
11	Information technology and the digital transformation of building design	11-1
	<i>José Pedro Carvalho, Luís Bragança and Ricardo Mateus</i>	
11.1	Introduction	11-1
11.2	Information technology for building sustainability	11-3
11.2.1	IT in the construction industry	11-3
11.2.2	Building information modelling	11-4
11.3	Other innovative approaches	11-12
11.4	Sustainable buildings	11-14
11.5	Research projects	11-15
11.6	Conclusions	11-16
	Acknowledgments	11-17
	Bibliography	11-17
12	Energy efficiency in the change to nearly zero-energy buildings	12-1
	<i>Anderson A Fraga, Edna A Nico-Rodrigues, Luisa F Cabeza and Cristina E de Alvarez</i>	
12.1	Introduction	12-1
12.2	Energy consumption in buildings	12-4
12.3	Zero-energy buildings	12-6
12.4	Programs and regulations involved in the change to reduced energy consumption	12-9
12.5	Zero-energy-building examples	12-9
12.5.1	Malaysian green technology corporation— a zero-energy office	12-9
12.5.2	BedZED (Beddington zero fossil energy development)	12-12
12.6	Conclusions	12-14
	Bibliography	12-15

13	Energy use and the implementation of renewable energy in cities	13-1
	<i>Norberto S Odobez, Carlos Godoy and Luisa F Cabeza</i>	
13.1	Introduction	13-1
13.2	Short general description of renewable energy sources that can be used in cities	13-2
13.2.1	Description of renewable energy sources	13-2
13.2.2	Application of energy efficiency and renewable energy sources in cities	13-6
13.2.3	Other technologies that contribute to the application of renewable energy sources (RES) in cities	13-8
13.3	Discussion	13-13
13.4	Final considerations	13-13
	Bibliography	13-16
14	The role of materials in achieving sustainability in cities	14-1
	<i>Luisa F Cabeza</i>	
14.1	Introduction	14-1
14.2	Materials that can reduce energy demand in buildings	14-2
14.3	Materials to reduce embodied energy and embodied carbon in buildings	14-3
14.4	Materials for reducing the urban heat island	14-4
14.5	Materials for increasing circularity in cities	14-7
14.6	Conclusions and recommendations	14-8
	Acknowledgements	14-8
	Bibliography	14-8
15	Practical strategies for embodying the circular economy concept in the construction sector	15-1
	<i>Kamel Mohamed Rahla, Luís Bragança and Ricardo Mateus</i>	
15.1	Introduction	15-1
15.2	Theoretical background	15-2
15.3	Circular economy strategies for resources	15-4
15.4	Design for the CE	15-5
15.5	Digital practices in circular buildings	15-7
15.6	Examples of CE application in construction projects	15-8
15.7	Concluding remarks	15-8
	Bibliography	15-10

16	Integrated actions to address the COVID-19 pandemic and climate change impacts	16-1
	<i>Nils Larsson</i>	
16.1	Introduction	16-1
16.2	The COVID-19 pandemic	16-1
16.2.1	Highlights of COVID-19 impacts	16-3
16.2.2	COVID-19 impacts on living and working	16-4
16.2.3	COVID-19 and buildings	16-5
16.2.4	COVID-19 impacts on urban transport and mobility	16-6
16.2.5	COVID-19 impacts and urban form	16-6
16.2.6	Post-pandemic recovery	16-7
16.3	Climate change	16-9
16.3.1	The drivers	16-9
16.3.2	Climate change impacts	16-11
16.4	Integrated action	16-13
16.4.1	Urgent action	16-14
16.4.2	Immediate organizational and administrative steps	16-14
16.4.3	Planning and program initiatives	16-15
16.4.4	Building design and technology initiatives	16-18
16.5	Conclusions	16-20
	Acknowledgments	16-21
	Bibliography	16-21
