| In Lieu of a Preface to the Second Edition .....  | V    |   |
| Preface .....   | IX   |   |
| Acknowledgments .....   | XIII |   |
| I Group and Hamiltonian Structures of Fluid Dynamics .....  |      | 1 |
| 1 Symmetry groups for a rigid body and an ideal fluid .....                                       | 1    |   |
| 2 Lie groups, Lie algebras, and adjoint representation .....                                      | 3    |   |
| 3 Coadjoint representation of a Lie group .....   | 10   |   |
| 3.A Definition of the coadjoint representation .....  | 10   |   |
| 3.B Dual of the space of plane divergence-free vector fields ..                                   | 12   |   |
| 3.C The Lie algebra of divergence-free vector fields and its<br>dual in arbitrary dimension ..... | 14   |   |
| 4 Left-invariant metrics for an arbitrary group .....   | 15   |   |
| 5 Applications to hydrodynamics .....   | 20   |   |
| 6 Hamiltonian structure for the Euler equations .....   | 26   |   |
| 7 Ideal hydrodynamics on Riemannian manifolds .....   | 32   |   |
| 7.A The Euler hydrodynamic equation on manifolds .....  | 33   |   |
| 7.B Dual space to the Lie algebra of divergence-free fields ..                                    | 34   |   |
| 7.C Inertia operator of an $n$ -dimensional fluid.....  | 38   |   |
| 8 Proofs of theorems about divergence-free fields .....   | 41   |   |
| 9 Conservation laws in higher-dimensional hydrodynamics .....                                     | 45   |   |
| 10 The group setting of ideal magnetohydrodynamics .....  | 52   |   |
| 10.A Equations of magnetohydrodynamics and the<br>Kirchhoff equations .....                       | 52   |   |
| 10.B Magnetic extension of any Lie group .....  | 53   |   |
| 10.C Hamiltonian formulation of the Kirchhoff and<br>magnetohydrodynamics equations .....         | 57   |   |
| 11 Finite-dimensional approximations of the Euler equation .....                                  | 59   |   |
| 11.A Approximations by vortex systems in the plane .....  | 59   |   |

|            |   |     |
|------------|---|-----|
| 11.B       | Nonintegrability of four or more point vortices . . . . .                       | 61  |
| 11.C       | Hamiltonian vortex approximations in three dimensions . . . . .                 | 62  |
| 11.D       | Finite-dimensional approximations of diffeomorphism groups . . . . .            | 63  |
| 12         | The Navier–Stokes equation from the group viewpoint . . . . .                   | 66  |
| <b>II</b>  | <b>Topology of Steady Fluid Flows . . . . .</b>                                 | 73  |
| 1          | Classification of three-dimensional steady flows . . . . .                      | 73  |
| 1.A        | Stationary Euler solutions and Bernoulli functions . . . . .                    | 73  |
| 1.B        | Structural theorems . . . . .   | 77  |
| 2          | Variational principles for steady solutions . . . . .                           | 80  |
| 2.A        | Minimization of the energy . . . . .  | 80  |
| 2.B        | The Dirichlet problem and steady flows . . . . .                                | 83  |
| 2.C        | Relation of two variational principles . . . . .                                | 85  |
| 2.D        | Semigroup variational principle for two-dimensional steady flows . . . . .      | 87  |
| 3          | Stability of stationary points on Lie algebras . . . . .                        | 90  |
| 4          | Stability of planar fluid flows . . . . .                                       | 94  |
| 4.A        | Stability criteria for steady flows . . . . .                                   | 95  |
| 4.B        | Wandering solutions of the Euler equation . . . . .                             | 103 |
| 5          | Linear and exponential stretching of particles . . . . .                        | 105 |
| 5.A        | The linearized and shortened Euler equations . . . . .                          | 105 |
| 5.B        | The action–angle variables . . . . .  | 106 |
| 5.C        | Spectrum of the shortened equation . . . . .                                    | 108 |
| 5.D        | The Squire theorem for shear flows . . . . .                                    | 109 |
| 5.E        | Steady flows with exponential stretching of particles . . . . .                 | 110 |
| 5.F        | Analysis of the linearized Euler equation . . . . .                             | 111 |
| 5.G        | Inconclusiveness of the stability test for space steady flows . . . . .         | 113 |
| 6          | Features of higher-dimensional steady flows . . . . .                           | 116 |
| 6.A        | Generalized Beltrami flows . . . . .  | 117 |
| 6.B        | Structure of four-dimensional steady flows . . . . .                            | 118 |
| 6.C        | Topology of the vorticity function . . . . .                                    | 119 |
| 6.D        | Nonexistence of smooth steady flows and sharpness of the restrictions . . . . . | 124 |
| <b>III</b> | <b>Topological Properties of Magnetic and Vorticity Fields . . . . .</b>        | 127 |
| 1          | Minimal energy and helicity of a frozen-in field . . . . .                      | 127 |
| 1.A        | Variational problem for magnetic energy . . . . .                               | 127 |
| 1.B        | Extremal fields and their topology . . . . .                                    | 128 |
| 1.C        | Helicity bounds the energy . . . . .  | 129 |
| 1.D        | Helicity of fields on manifolds . . . . .                                       | 132 |
| 2          | Topological obstructions to energy relaxation . . . . .                         | 137 |
| 2.A        | Model example: Two linked flux tubes . . . . .                                  | 137 |
| 2.B        | Energy lower bound for nontrivial linking . . . . .                             | 140 |

| Contents  | XVII       |
|---|------------|
| 3 Sakharov–Zeldovich minimization problem . . . . .   | 143        |
| 4 Asymptotic linking number . . . . .   | 149        |
| 4.A Asymptotic linking number of a pair of trajectories . . . . .   | 149        |
| 4.B Digression on the Gauss formula . . . . .   | 152        |
| 4.C Another definition of the asymptotic linking number . . . . .   | 154        |
| 4.D Linking forms on manifolds . . . . .  | 156        |
| 5 Asymptotic crossing number . . . . .  | 162        |
| 5.A Energy minoration for generic vector fields . . . . .   | 162        |
| 5.B Asymptotic crossing number of knots and links . . . . .   | 165        |
| 5.C Conformal modulus of a torus . . . . .  | 169        |
| 6 Energy of a knot . . . . .  | 171        |
| 6.A Energy of a charged loop . . . . .  | 171        |
| 6.B Generalizations of the knot energy . . . . .  | 173        |
| 7 Generalized helicities and linking numbers . . . . .  | 176        |
| 7.A Relative helicity . . . . .   | 177        |
| 7.B Ergodic meaning of higher-dimensional helicity integrals . . . . .  | 179        |
| 7.C Higher-order linking integrals . . . . .  | 185        |
| 7.D Calugareanu invariant and self-linking number . . . . .   | 189        |
| 7.E Holomorphic linking number . . . . .  | 191        |
| 8 Asymptotic holonomy and applications . . . . .  | 197        |
| 8.A Jones–Witten invariants for vector fields . . . . .   | 197        |
| 8.B Interpretation of Godbillon–Vey-type characteristic classes . . . . .   | 203        |
| <b>IV Differential Geometry of Diffeomorphism Groups . . . . .</b>  | <b>207</b> |
| 1 Preliminaries in differential geometry . . . . .  | 208        |
| 1.A The Lobachevsky plane of affine transformations . . . . .   | 208        |
| 1.B Curvature and parallel translation . . . . .  | 210        |
| 1.C Behavior of geodesics on curved manifolds . . . . .   | 213        |
| 1.D Relation of the covariant and Lie derivatives . . . . .   | 214        |
| 2 Sectional curvatures of Lie groups . . . . .  | 217        |
| 3 Geometry of the group of torus diffeomorphisms . . . . .  | 222        |
| 3.A The curvature tensor for the group of torus diffeomorphisms . . . . .   | 222        |
| 3.B Curvature calculations . . . . .  | 225        |
| 4 Diffeomorphism groups and unreliable forecasts . . . . .  | 227        |
| 4.A Curvatures of various diffeomorphism groups . . . . .   | 227        |
| 4.B Unreliability of long-term weather predictions . . . . .  | 231        |
| 5 Exterior geometry of the group of diffeomorphisms . . . . .   | 232        |
| 6 Conjugate points in diffeomorphism groups . . . . .   | 237        |
| 7 Getting around the finiteness of the diameter of the group of volume-preserving diffeomorphisms ( <i>by A. Shnirelman</i> ) . . . . . | 239        |
| 7.A Interplay between the internal and external geometry of the diffeomorphism group . . . . .  | 240        |
| 7.B Diameter of the diffeomorphism groups . . . . .   | 241        |

|          |  |            |
|----------|--|------------|
| 7.C      | Comparison of the metrics and completion of the group of diffeomorphisms . . . . .   | 242        |
| 7.D      | The absence of the shortest path . . . . .   | 244        |
| 7.E      | Discrete flows . . . . .   | 248        |
| 7.F      | Outline of the proofs . . . . .  | 250        |
| 7.G      | Generalized flows . . . . .  | 251        |
| 7.H      | Approximation of generalized flows by smooth ones . . . . .  | 254        |
| 7.I      | Existence of cut and conjugate points on diffeomorphism groups . . . . .   | 256        |
| 8        | Infinite diameter of the group of symplectomorphisms . . . . .   | 258        |
| 8.A      | Right-invariant metrics on symplectomorphisms . . . . .  | 259        |
| 8.B      | Calabi invariant . . . . .   | 262        |
| 8.C      | Bi-invariant metrics and pseudometrics on the group of Hamiltonian diffeomorphisms . . . . .                                     | 268        |
| 8.D      | Bi-invariant indefinite metric and action functional on the group of volume-preserving diffeomorphisms of a three-fold . . . . . | 272        |
| <b>V</b> | <b>Kinematic Fast Dynamo Problems . . . . .</b>  | <b>275</b> |
| 1        | Dynamo and particle stretching . . . . .   | 275        |
| 1.A      | Fast and slow kinematic dynamos . . . . .  | 275        |
| 1.B      | Nondissipative dynamos on arbitrary manifolds . . . . .  | 278        |
| 2        | Discrete dynamos in two dimensions . . . . .   | 281        |
| 2.A      | Dynamo from the cat map on a torus . . . . .   | 281        |
| 2.B      | Horseshoes and multiple foldings in dynamo constructions . . . . .   | 284        |
| 2.C      | Dissipative dynamos on surfaces . . . . .  | 288        |
| 2.D      | Asymptotic Lefschetz number . . . . .  | 289        |
| 3        | Main antidynamo theorems . . . . .   | 290        |
| 3.A      | Cowling's and Zeldovich's theorems . . . . .   | 290        |
| 3.B      | Antidynamo theorems for tensor densities . . . . .   | 291        |
| 3.C      | Digression on the Fokker–Planck equation . . . . .   | 295        |
| 3.D      | Proofs of the antidynamo theorems . . . . .  | 298        |
| 3.E      | Discrete versions of antidynamo theorems . . . . .   | 301        |
| 4        | Three-dimensional dynamo models . . . . .  | 303        |
| 4.A      | “Rope dynamo” mechanism . . . . .  | 303        |
| 4.B      | Numerical evidence of the dynamo effect . . . . .  | 304        |
| 4.C      | A dissipative dynamo model on a three-dimensional Riemannian manifold . . . . .  | 305        |
| 4.D      | Geodesic flows and differential operations on surfaces of constant negative curvature . . . . .                                  | 311        |
| 4.E      | Energy balance and singularities of the Euler equation .   | 317        |
| 5        | Dynamo exponents in terms of topological entropy . . . . .   | 317        |
| 5.A      | Topological entropy of dynamical systems . . . . .   | 317        |

|           |   |     |
|-----------|---|-----|
| 5.B       | Bounds for the exponents in nondissipative dynamo models .....                                  | 318 |
| 5.C       | Upper bounds for dissipative $L^1$ -dynamos .....   | 319 |
| <b>VI</b> | <b>Dynamical Systems with Hydrodynamic Background .....</b>                                     | 321 |
| 1         | The Korteweg–de Vries equation as an Euler equation .....                                       | 321 |
| 1.A       | Virasoro algebra .....  | 321 |
