Contents

Part I Solid-State Reaction, Photomechanical Crystals, and Elastic Crystals

1 **Alternating Copolymerizations via Alternating 1D Columnar Molecular Assemblies of *p*-Quinodimethane Derivatives in Solution and Solid States** 3
Takahito Itoh and Mikiji Miyata

2 **Cooperative Photochemical Reactions in Organic Molecular Crystals** 27
Daichi Kitagawa and Seiya Kobatake

3 **Versatile and Fast Organic Crystal Actuation by Photothermal Effect and Natural Vibration** 41
Hideko Koshima, Shodai Hasebe, and Yuki Hagiwara

4 **Photoresponsive Crystals with Bio-mimetic Functions** 63
Ryo Nishimura, Satoshi Yokojima, and Kingo Uchida

5 **Mechanical Properties in Organic Molecular Crystals Toward Photonic Applications** 87
Shotaro Hayashi and Takumi Matsuo

Part II Luminescent, Electrical, and Magnetic Properties

6 **Tunable Mechanochromic Luminescence of Organic Crystals** 121
Suguru Ito

7 **Development of Organic Semiconductors with Exceptional Layered Crystallinity** 143
Satoru Inoue, Seiji Tsuzuki, and Tatsuo Hasegawa

8 **Control of Molecular Orientation in Asymmetric Thienoacene-Based Organic Semiconductors** 161
Hiroshi Katagiri

9 **Polarization-Induced Phenomena in Ferroelectric Liquid Crystals Comprising of Extended π-Conjugated Units** 191
Masahiro Funahashi

10 **Magneto-Structural Correlation in Organic Radical Crystals Containing Nitroxyl and Triazinyl Spin Centers** 213
Naoki Yoshioka, Masaomi Takii, and Youhei Miura

11 **Construction of Molecule-Based Strongly Isotropic Lattices and Their Physical Properties** 231
Qi Chen, Yoshiaki Shuku, Rie Suizu, and Kunio Awaga
